SECTION 7: Handling and stor	age
7.1. Precautions for safe handling	
Safe use of the product	: The product must be handled in accordance with good industrial hygiene and safety procedures.
Sale use of the product	Only experienced and properly instructed persons should handle gases under pressure.
	Consider pressure relief device(s) in gas installations.
	Ensure the complete gas system was (or is regularily) checked for leaks before use.
	Do not smoke while handling product.
	Use only properly specified equipment which is suitable for this product, its supply pressure and temperatu Contact your gas supplier if in doubt.
	Avoid suck back of water, acid and alkalis.
	Assess the risk of potentially explosive atmospheres and the need for explosion-proof equipment.
	Purge air from system before introducing gas.
	Take precautionary measures against static discharge. Keep away from ignition sources (including static discharges).
	Consider the use of only non-sparking tools.
	Do not breathe gas.
	Avoid release of product into atmosphere.
	Ensure equipment is adequately earthed.
Safe handling of the gas receptacle	: Do not allow backfeed into the container.
	Protect receptacles from physical damage; do not drag, roll, slide or drop.
	When moving receptacles, even for short distances, use a cart (trolley, hand truck, etc.) designed to transport receptacles.
	Leave valve protection caps in place until the container has been secured against either a wall or bench or placed in a container stand and is ready for use.
	If user experiences any difficulty operating receptacle valve discontinue use and contact supplier.
	Never attempt to repair or modify container valves or safety relief devices.
	Damaged valves should be reported immediately to the supplier.
	Keep container valve outlets clean and free from contaminants particularly oil and water. Replace valve outlet caps or plugs and container caps where supplied as soon as container is disconnected
	from equipment.
	Close container valve after each use and when empty, even if still connected to equipment.
	Never attempt to transfer gases from one container to another.
	Never use direct flame or electrical heating devices to raise the pressure of a container.
	Do not remove or deface labels provided by the supplier for the identification of the receptacle contents.
	Suck back of water into the container must be prevented.
	Open valve slowly to avoid pressure shock.
7.2. Conditions for safe storage, inclu	ding any incompatibilities
	Observe all regulations and local requirements regarding storage of containers.
	Containers should not be stored in conditions likely to encourage corrosion.
	Container valve guards or caps should be in place.
	Containers should be stored in the vertical position and properly secured to prevent them from falling over Stored containers should be periodically checked for general condition and leakage.
	Keep container below 50°C in a well ventilated place.
	Store containers in location free from fire risk and away from sources of heat and ignition. Keep away from combustible materials. Segregate from oxidant gases and other oxidants in store.
	All electrical equipment in the storage areas should be compatible with the risk of a potentially explosive atmosphere.
